Eight years taking AI to production in finance: from credit risk and classic scoring to the knowledge graphs, advanced RAG and multi-agent systems now running in Tier-1 banks. I lead the AI practice of a banking studio and still write production code. Specialty: knowledge bases, RAG and rigorous LLM evaluation in regulated environments.

EXPERIENCE

Head of AI — Future Finance Studio, Globant 2026 — present · Madrid
I lead all of the studio's AI projects and proposals for Spanish and global Tier-1 banking: solution architecture, technical proposals, delivery quality, training the whole team — without stepping away from coding.

Data & AI Scientist — Global AI Platform, Banco Santander 2025 — present · Globant contractor
Embedded full-time in the bank's global AI platform. Knowledge graphs, RAG, LLM evaluation frameworks and multi-agent systems in production.

Data Scientist / AI Engineer — Bluecap → Future Finance (Globant) 2020 — 2025 · Madrid
Joined Bluecap Management Consulting (2020); Globant acquired it in 2022 and the same team is today the Future Finance studio. From hands-on credit-risk modelling for European and LATAM banking to knowledge-base, RAG and multi-agent architectures for Tier-1 clients.

Junior Associate Data Scientist — Deloitte Digital 2019 — 2020 · Madrid
Conversational AI (Dialogflow, IBM Watson, NLP frameworks) and deep learning for text and image classification.

Data Science Intern — ADIF 2018 — 2019
Energy-consumption forecasting and dashboards for the high-voltage rail network.

SELECTED PROJECTS (anonymised for confidentiality)

- **Knowledge graph for the CIB of a global Tier-1 bank** — unifies structured and unstructured data; 500+ pages of nested documentation, hierarchical chunking, hybrid semantic-lexical retrieval and relationship navigation. AWS (Bedrock, S3, OpenSearch).
- **Multi-agent system for the payments entity of a Spanish banking group** — generates use cases straight into Jira from requirements; deterministic state graph with LLM nodes and structured outputs for regulatory traceability. Azure.
- **Knowledge base for a banking contact center of ~12M calls/year** — structural chunking and hybrid retrieval under a bank's SLAs.
- **LLM evaluation framework** — golden sets, LLM-as-a-judge and NER metrics; the criteria that decide which architecture and model reach production.
- **Corpus for a FAQ agent (Salesforce) at a Spanish Tier-1 bank** — generation, curation and intent coverage.
- **Credit-risk ML (Bluecap)** — pre-approved lending, limit optimisation for a top-tier Mexican bank, ESG climate risk (climate-adjusted PD).
- **Personal (github.com/Danimr96)** — full-stack apps with real users and freemium monetisation (Next.js/Supabase/Vercel), lead-handling agents (FastAPI), a personal knowledge system with Claude Code, and this site (canvas graph + agent on the Claude API).

STACK

- **Languages/Backend:** Python (expert), FastAPI, PostgreSQL, Docker, CI/CD.
- **Cloud/AI:** AWS (Bedrock, OpenSearch, S3, Lambda, Step Functions, Glue, Athena), Azure (AI Search, Form Recognizer).
- **GenAI:** advanced RAG, multi-agent systems, LLM evaluation, vector DBs (OpenSearch, FAISS, ChromaDB, Milvus), knowledge graphs (Neo4j), LangChain/LlamaIndex with judgement.
- **ML/DL:** scikit-learn, XGBoost, CatBoost, LightGBM, PyTorch, TensorFlow, Transformers/HuggingFace, NER, OCR, Whisper; pandas, polars, PySpark.
- **Product:** Next.js, Supabase, Vercel; Claude Code as a daily driver.

EDUCATION

- **Postgraduate, Big Data & Analytics** — UC3M + Deloitte.
- **BSc in Energy Engineering** — Universidad Politécnica de Madrid (UPM).

LANGUAGES

- Native Spanish · Full professional English (daily international environment).
- EU citizen — no sponsorship needed in Europe.

DOMAINS

- Retail and corporate Tier-1 banking · Credit risk · Regulatory traceability · Contact centers.
